Some of these possess decided merits, and present claims for the support of capitalists and of the public that are, at least, worthy of careful examination; others are advanced by parties who are evidently ignorant of the thermo-dynamic, chemical, and mechanical laws upon which some of these operations depend, and schemes are sometimes presented that are visionary and impracticable. A brief review of the plans proposed for street railways, their merits and defects, with the cost of plant and of operation, will probably possess sufficient interest at the present time to excuse the preparation and publication of this volume.
